PRESSURE LUBE

Biodegradable Lubricant that works in all water types

Description:

PRESSURE LUBE is a biodegradable soluble lubricant, developed specifically for the diamond drilling industry. PRESSURE LUBE’s unique characteristics provide maximum reduction of torque, cooling of the bit and will work in all types of water.

Applications/ Functions:

Reduces frictional drag and torque on drill strings. Extends bit life and improves penetration rates. Enhances the cooling and minimises wear of diamond bits and drill string.

Advantages:

Readily biodegradable. Improves penetration rates. Reduces string vibration. Designed for fresh water, but will continue to work in makeup water with low to mid-range salt content.

Recommended Treatment:

Add 2.5 to 10.0 litres per 1000 litres water. May be added directly at the pump suction. Can be used through an injection pump or set up a suction hose from the rig pump.

Packaging:

PRESSURE LUBE is packaged in 25 ltr or 205 ltr drums & 1000ltr pods.
